

Group 3 Project Proposal

Project title: Planet 3 Gym Membership and Class Scheduling System

Project Leader: Seyun Kim

Group Members and Responsibilities:

- Alejandro Castillo – Forms
- Sahvaan Price - MySQL, Reports
- Kayla Savory – Proposal
- Favour Adeagbo – Presentation
- Carmen Paro – Notetaker
- Seyun Kim - ERD diagram / Logical design tables

Overview

Planet 3 is a small local gym owned by Joe Mama (Joemama@planet3.com, 123-456-7890) that needs help with booking classes and managing subscriptions. Joe currently operates Planet 3 using all paper-based records for memberships, class bookings, and payments since he grew up in the '60s. Our team will create an electronic database with form inputs, tables, and reports to provide Planet 3 with a modern system that enhances the gym membership experience. A member can notice an employee when an equipment needs maintenance attention.

Business Rules

A member can have one membership subscription. A member can have access to the VIP Suite. Payments for membership subscriptions must be paid on the first day of each month by every member. One member can book multiple private bookings with a trainer and book a classes with a specific coach as an instructor. A trainer can have multiple members as a client and teach multiple classes. A member can notice an employee when an equipment needs maintenance attention, so the relationship is one-to-many. An employee is mandated to check all the equipment once a month. Payment has a many-to-one relationship with subscription because there are monthly payments for one subscription. Every employee reports to Joe as their supervisor, making a reclusive relationship between them.

Project Scope and Features

The project will be built using MySQL for the database with Microsoft Access and Report Builder for the forms and reports. The system will manage the following entities: Non-members, Members, Trainers, Classes, Payments, Appointments, Subscriptions, VIP Status, Equipment Maintenance. It will also include advanced features like:

- Supertype/Subtype (Trainer and Member as users)
- Weak entity (subscription varies on member)
- Time – variant entity (class schedules).
